

Press Release

ATLANTIA LAUNCHES NEW CORPORATE WEBSITE, PROVIDING GATEWAY TO ALL AREAS OF GROUP, PRESENT IN 24 COUNTRIES

Rome, 4 October 2021. Atlantia's new corporate website (www.atlantia.com) is now online after a complete revamp of both its layout and content. The new site provides a "gateway" to the world of Atlantia and its companies, with a presence in 24 countries throughout the world. The new platform gives pride of place to aspects relating to sustainability, innovation and new forms of mobility, considered of strategic importance for Atlantia and included in the growth guidelines presented to investors last June.

The many activities relating to these aspects are illustrated through a series of constantly updated multimedia stories, specially created for the website and featuring the approximately 150 operating companies that make up the Group: from the leading role being played by Aeroporti di Roma and Aéroports de la Côte d'Azur in cutting CO₂ emissions, to Grupo Costanera's commitment to the stewardship of Chile's water resources and preserving large green spaces in the city of Santiago; from the birth of the new company, Telepass Digital, to develop smart mobility projects, to the innovative mobility services launched by Abertis through its subsidiary, Emovis.

The platform contains a dedicated area for investors and analysts, providing all the information and data they need about the Group's financial performance and its businesses. The site also includes a "Download Center", offering visitors the chance to access and download a full range of documents, including, for example, financial statements, results, integrated reports, insider trades, corporate governance, etc.

Atlantia's employees play an active role in the new site, above all the young people who have recently joined the Company. A third of the Parent Company's personnel are aged under 30 and they have been assigned the key role of telling the story of the Company's innovation pathway.

The launch of Atlantia's new website forms part of the overall strategy for changing the Company and the Group, including a redefinition of our digital positioning in order to significantly boost transparency and efficiency in relations with all our stakeholders.
